

Antonio Martini

Professor, University of Oslo

17-10-2023

# DO WE KNOW OUR TD BETTER THAN AI?

# Who is Antonio Martini?

## Italian

- No kebab pizza! ☺
- 12 years in Scandinavia– survived many winters!

## Previously

- Software Developer
- PhD in Software Engineering
- Postdoc
- Independent Consultant
- Principal, Strategic Researcher at CA Technologies (now Broadcom)
- 12 years of research and practice on technical debt

## Hobbies

- Board games, strategy computer games, pool, etc.
- Football, volleyball, beach volley, fencing
- Piano, Drumset, etc.
- Travel!
- ...and no time for them! ☺

# What is technical debt?

# What the users see

Wonderful  
features!

# What the developers see

Awful  
design!

# TechDebtOps – A 3-year project funded by the Research Council of Norway

**Data-driven continuous  
management of technical debts  
for sustainable software  
development**

**AKVA**GROUP™

**knowit**

 **VISMA**

**VOLVO**

**SAAB**

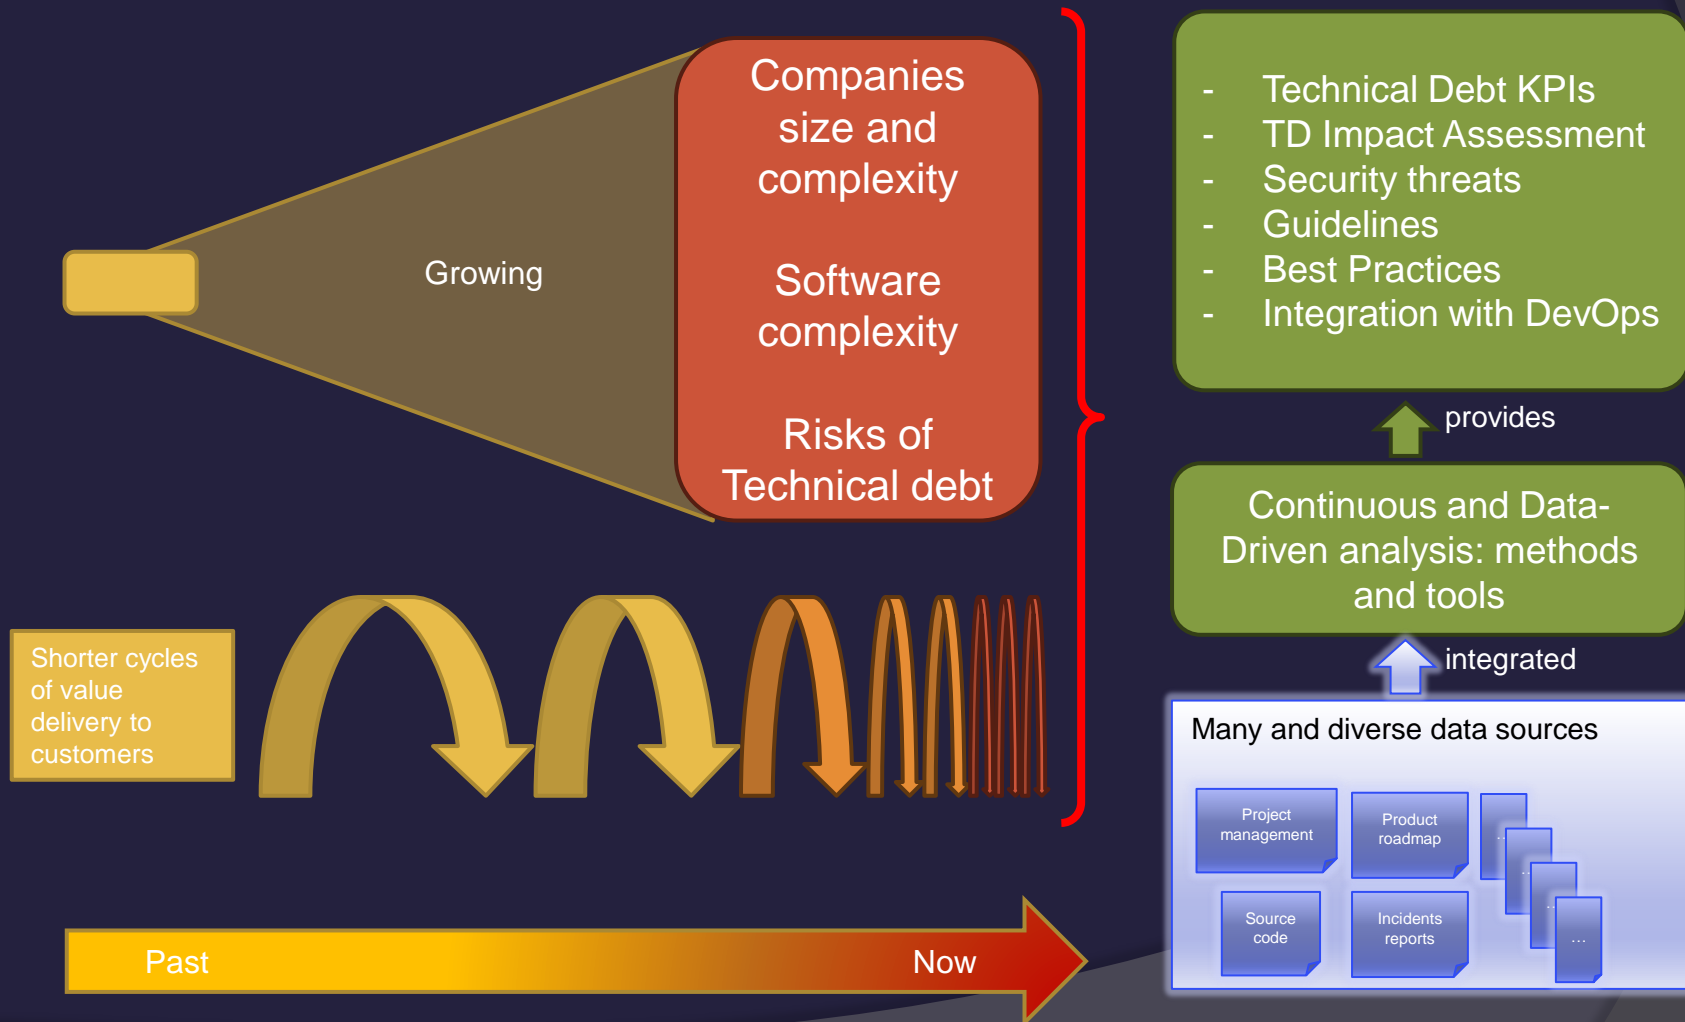

**ca**  
technologies

**SIEMENS**

**Nordea**

# Challenges and goals of technical debt

# AI trends

- ◎ Current trends in AI
  - Large Language Models (**LLMs**)
  - **Transformers**-based (fast-)training

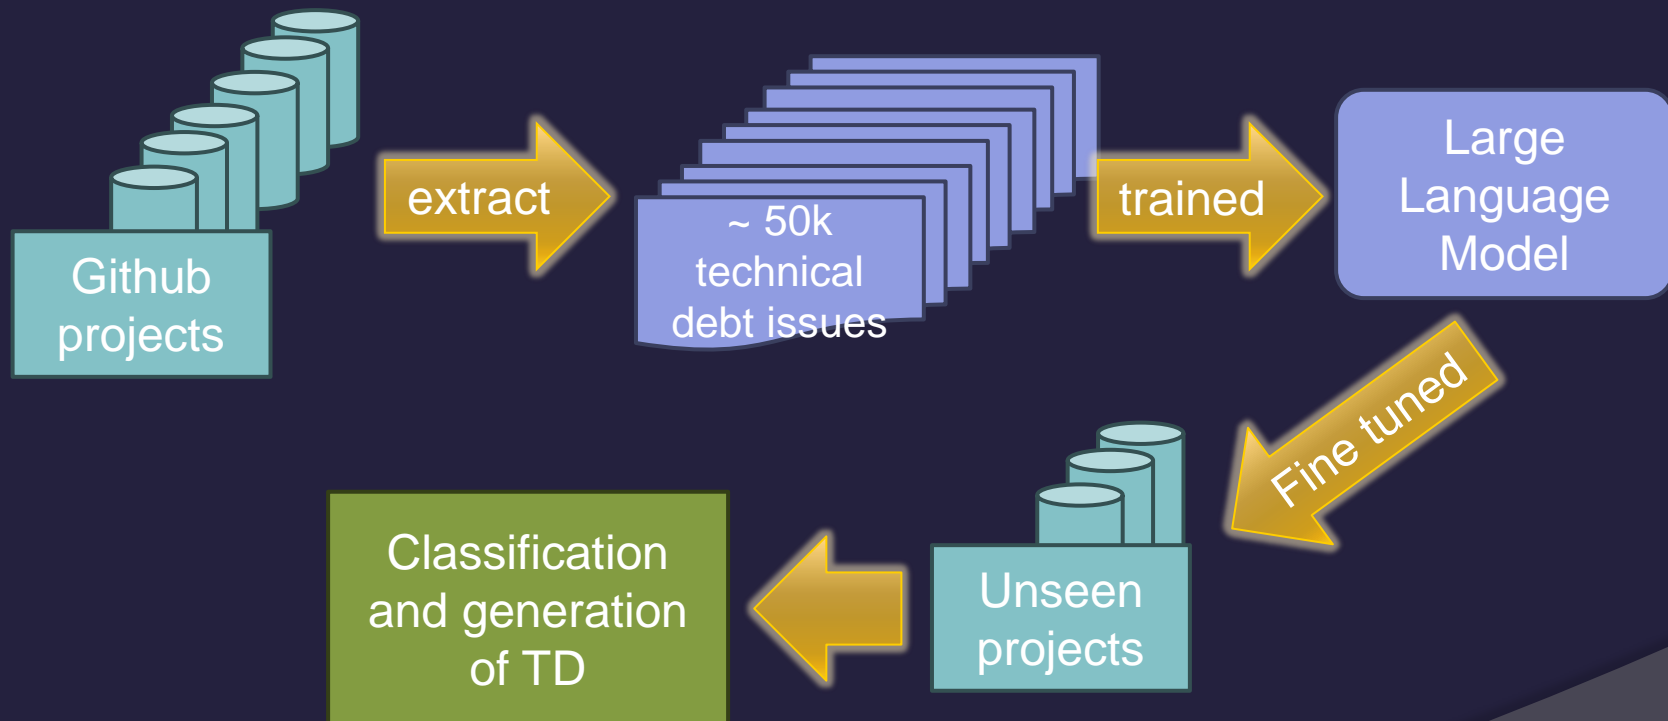

# Generative AI for software development

- ◎ Why LLMs in software development?
  - Many past (and limited) approaches are often based on **one specific data source only**
    - E.g. Code repo analysis
  - We need more **context!**
    - A lot of the context is encoded in documents using **natural language**

# (semi-) automatic tracking TD: ML-based recognition of TD in github issues \*

\* D. Skryseth, K. Shivashankar, I. Pilán and A. Martini, "Technical Debt Classification in Issue Trackers using Natural Language Processing based on Transformers," *TechDebt 2023*

# Classification of TD in github issues

A screenshot of a GitHub repository's issue tracker. The top bar shows 130 Open issues and 659 Closed issues. Below the bar, a list of issues is displayed. Each issue has a title, a status (e.g., 'opened 2 weeks ago'), and a set of labels. The labels 'tech debt' are highlighted with red boxes in several issues. The issues are:

- t3c remove perl dependency and references** (opened 2 weeks ago by jpappa200). Labels: ansible, improvement, tech debt, unused code.
- Fix parameters permission conditional** (opened on Aug 22 by ericholguin). Labels: low impact, tech debt, Traffic Ops.
- Ansible Playbooks should upgrade to APIv4** (opened on Jul 18 by rimashah25). Labels: ansible, high impact, improvement, medium difficulty, tech debt.
- Remove Traffic Ops APIv3** (opened on Jul 18 by rimashah25). Labels: improvement, medium difficulty, tech debt, Traffic Ops.
- Refactor by renaming CCR to Traffic Router/TR** (opened on Nov 14, 2022 by rimashah25). Labels: tech debt.
- Testing Delivery Services are not full representations** (opened on Nov 14, 2022 by ocket8888). Labels: low difficulty, low impact, tech debt, tests, TO Client (Go).
- Add blueprint for a Global Configuration object** (opened on Aug 11, 2022 by ocket8888). Labels: blueprint, tech debt.
